

Data Science & Analytics – Task 1 (2026)

By Future Interns

Business Sales Performance Analytics

About the Task

In this real-world internship task, you will work with **business sales data** to perform the kind of analysis that **data analysts do for real companies, startups, and agencies**.

Your goal is not just to create charts, but to help a business answer important questions such as:

- Which products generate the most revenue?
- How do sales change over time?
- Which categories or regions are most profitable?
- Where should the business focus to grow faster?

This task is designed so that **even beginners can start**, while still being **valuable in real job and freelance scenarios**.

You do **not** need advanced coding skills.

You need curiosity, logical thinking, and willingness to learn analytics tools

What You'll Do

During this task, you will:

- Clean and organize raw sales data (Excel or CSV format)
- Analyze:
 - Revenue trends over time
 - Top-selling products
 - High-value categories or regions
- Build a **professional, client-ready dashboard or analysis report**
- Write clear insights and recommendations **as if you are advising a real business**

Tools You Can Use (Flexible)

You may use **any one or a combination** of the following tools:

- [Power BI](#)
- [Tableau](#)
- [Microsoft Excel](#)
- [Python](#) (optional, for advanced analysis)

There is **no restriction** on tools — just like real analyst roles.

Skills You'll Gain

By completing this task, you will build practical skills such as:

- Data cleaning & preparation
- Business-focused KPI analysis
- Trend and performance analysis
- Insight generation and reporting

- Business storytelling using data

These are **core skills required in analytics jobs and freelance projects**.

Datasets – Choose What Fits Your Learning

You may use **any dataset** that aligns with the task objective (sales, revenue, products, categories, regions).

Recommended Beginner-Friendly Datasets

-  **Online Retail Dataset (Kaggle)**
<https://www.kaggle.com/datasets/ulrikthygepedersen/online-retail-dataset>
Real e-commerce transactions with product, quantity, and revenue data.
-  **Superstore Sales Dataset**
<https://www.kaggle.com/datasets/vivek468/superstore-dataset-final>
Ideal for beginners — includes region, category, sales, and profit.
-  **E-commerce Orders Dataset (Kaggle)**
<https://www.kaggle.com/datasets/carrie1/ecommerce-data>
Good for analyzing order trends and category performance.

You are not limited to these datasets.

You may use **any public, private, simulated, or self-created dataset** as long as it represents a **real business sales scenario** and aligns with this task.

Real-World Tip (Very Important)

To get the **maximum value** from this task, don't limit yourself to online datasets.

Look around you:

- A local shop
- A small online seller
- A service business tracking monthly revenue

Create this dashboard **for them** using sample or anonymized data.

This helps you:

- Think like a business consultant
- Build confidence working with real problems
- Create dashboards you can **show to clients**
- Learn how analytics can actually **help you earn**

Many of our interns and freelancers start exactly this way.

Final Deliverable

You must submit:

- A **client-ready dashboard or analysis report**
- Clear business insights and actionable recommendations
- Your work documented properly (GitHub / dashboard link)

Your submission should look like something you would confidently show to:

- A business owner
- A startup founder
- An analytics client

Showcase Your Work

Once you complete this task:

- Upload your project to a **public GitHub repository** with proper documentation (README, files, dashboard links).
- Share a **professional post on LinkedIn** highlighting:
 - What problem you worked on
 - Key insights or outcomes
 - Tools used and learnings

Please **tag and follow Future Interns on LinkedIn** so your work can be recognized and shared:
